

Assignment: React Application with Bootstrap Components and Custom CSS

Objective

To create a React application using multiple components, Bootstrap for UI elements, and custom CSS for styling the registration form.

Requirements

1. Create a React Application

- Create a new React app named **third_app**

2. Folder Structure

Inside the src folder, create the following folders:

- components
- css

3. Components Creation

Inside the components folder, create the following files:

- Header.jsx
- Accordion.jsx
- RegistrationForm.jsx
- Footer.jsx

4. CSS File

- Inside the css folder, create a file named:
 - **registration_form.css**
- This CSS file will be used to style the Registration Form component.

Component Details

1. Header.jsx

- Create a **Bootstrap Navbar**.
- The navbar should include:
 - Navigation links such as Home, About, Contact, Login.

2. Accordion.jsx

- Create a **Bootstrap Accordion component**.
- The accordion should contain multiple items with headings and content.

(you can write question and answer of your choice assuming that you are making a college website)

3. Registration Form

- Create a Registration Form **using Bootstrap Input Groups with Font Awesome icons**.
- **Use CSS Flexbox to divide the registration section into two parts.**

Layout Design

- The registration section should be divided into two divisions using flex:
 - Left Division
 - Display an image (related to registration)
 - Right Division
 - Display the registration form.

Form Fields

The registration form should include the following fields:

- **Name** – Text input
- **Email** – Email input
- **Phone** – Number input
- **City** – Dropdown (<select>)
- **Address** – Textarea (<textarea>)

CSS Styling (registration_form.css)

Apply custom styles using registration_form.css to:

- Change the **background color of all input fields**
- Set the **width and height of the form container(div)**
- Add **border styling** to the form container(div)
- Apply **box-shadow (shading effect)** to the container for better UI appearance

The registration_form.css file should be imported into RegistrationForm.jsx.

4. Footer.jsx

- Create a **full-width footer**.
- Use a Bootstrap container.

- Apply:
 - Background color
 - Text content (e.g., copyright)
 - Center alignment

5. Rendering Components

- Import and render all components in **App.jsx** in the following order:
 1. Header
 2. Accordion
 3. RegistrationForm
 4. Footer
